
a
dense tiling + noise, own fit
odd (train)
50 ms
b
dense tiling + noise, own fit
even (test)
50 ms
c
noise alone turns dense tiling into sparse-tiling statistics
sparse tiling
dense tiling + noise
dense tiling
median reliability
fraction r ≥ 0.3
xval lag-0 corr
peak-time ρ
d
timing replication at matched rate
other
dense tiling
sparse tiling
peak-time ρ (held-out types)
mean rate (stack units)
e
Spearman ρ = -0.25 (55 areas)
peak latency after stimulus (ms)
hierarchy score (Harris et al. 2019)
f
Spearman ρ = -0.16 (53 areas)
peak latency to movement onset (ms)
hierarchy score (Harris et al. 2019)
g
aligned to stimulus or movement?
fast vs slow RT pattern correlation
sparse stim
sparse move
dense stim
dense move
